

ABSTRACT OF THE DISCLOSURE

An electronic dartboard comprises a dartboard frame in which a plurality of dartboard blocks are disposed. The dartboard blocks are formed of a dartboard body and a mounting seat in which the dartboard body is movably disposed. The dartboard frame is mounted in an outer frame which is provided with a score board and a circuit board. The dartboard frame is provided in the front with a plurality of protective frames, and in the back with an induction circuit film set. A cover plate is provided with a plurality of silencing holes and is fastened with the outer frame. A score display is separably connected to the circuit board.
